

biomega[®]

Salmigo[®] range

The best of Atlantic salmon for pet health

All natural, never chemical.

biomega[®] prides itself on circular upstream innovation. Our patented biotechnology process, which converts fresh salmon parts into peptides, proteins and oils through enzymatic hydrolysis, is what sets us apart.

Involving no added preservatives, the Salmigo[®] range of products retains the superb nutritional benefits of the high-quality raw materials from beginning to end.

What is included in the Salmigo[®] range?

Salmigo[®] Protect L60

Available in concentrated liquid format and highly palatable for dogs and cats, this high value ingredient with approximately 50% protein (90% on dry matter) has the potential to replace glycerine in semi-moist pet treats¹. It is an excellent protein and palatability booster.

Salmigo[®] Protect SD

Ideal for petfood and snacks due to its superb palatability, this peptide powder contains approximately 90% protein and is rich in micronutrients.

Salmigo[®] Active

Available as a premium partial hydrolysed salmon protein, this ingredient is perfect for premium petfood products and contains approximately 70% protein. Salmigo[®] Active is a highly palatable salmon protein compared with other salmon proteins.

Salmigo[®] Salmon Oil

Designed for pet snacks, our natural, premium and fresh salmon oil contains all the essential fatty acids, vitamins and antioxidants required to make a premium product.

biomegagroup.com

Why choose Salmigo®?

With the Salmigo® range, pet food brands and retailers can benefit from a sustainable salmon peptide or oil that delivers high quality unique processed products, which are highly digestible, rich in micronutrients, bioavailable and palatable compared to other salmon products.

An outstanding nutritional profile

The biomega® Salmigo® range retains the excellent nutrients present in the raw materials, thanks to our gentle enzymatic production process. This includes the trace mineral selenium, which has been shown to contribute to normal function of the immune system and protect cells from oxidative stress², alongside taurine for improved gut health³ and B vitamins to help maintain energy and general vitality⁴, which are essential for cats.

Excellent palatability for cats and dogs

Based on our latest study carried out by Passion4Feed, the Salmigo® range – especially Salmigo® Protect L60 – is favoured by cats and dogs in blind palatability tests. Due to its distinct salmon taste and smell, cats favoured Salmigo® kibble by up to 70% compared to a glycerine-based kibble, while dogs speed of consumption was greater with Salmigo® snacks¹.

An all-natural ingredient

Our patented process, which uses enzymatic hydrolysis, upcycles fresh salmon raw materials, which are non-GMO and supplied by sustainably certified salmon farms in the Nordic region. By gently separating the nutrients (soluble and non-soluble proteins, oil and minerals), they can be used in high value pet health applications, resulting in zero waste.
