

# Goflex | GOFLEX HIP & JOINT MOBILITY COLLAR

GoFlex 30 day active collar for dogs and cats.

One of five dogs experience joint issues associated with osteoarthritis (OA) in their lifetimes, resulting in pain and possible mobility challenges. In cats figures are even higher.

Glucosamine/Chondroitin are the most common supplement used in OA cases.

Joints are protected by the articular cartilage which acts as a shock absorber. In the case of joint discomfort, this cartilage is not functioning properly and less effective in protecting the joints, contributing to stiffness, pain, and decreased mobility.

GoFlex Collar has a powerful combination of Glucosamine/Chondroitin, MSM that are naturally found in pet's body and are important for the maintenance of healthy joints.

## GoFlex Collar effective for

- Arthritis and Rheumatoid arthritis pain relief
- Joints inflammation
- Muscles Soreness
- Antioxidant

 **Control Release technology**  
slowly releases the active ingredients into the pet's body.
