# CLUMPING

### Easy to scoop and locks in smells

- Sanicat Clumping Litters are natural mineral litters that are easy to manage and lock in smells powered by Oxygen Odour Control
- The clumping effect occurs when the liquid is absorbed which naturally forms solid clumps.
- These solid clumps lock in the bad odours and are easy to scoop out of the tray, prolonging the life of the litter while leaving your cat's toilet area fresh and clean
- Clumping litter requires regular clump removal so you don't need to change the whole tray as often. This means better efficiency with less product used
