**Phospholipid**  
Omega-3

**Natural**  
Choline

**Powerful**  
Astaxanthin

**Marine**  
Proteins

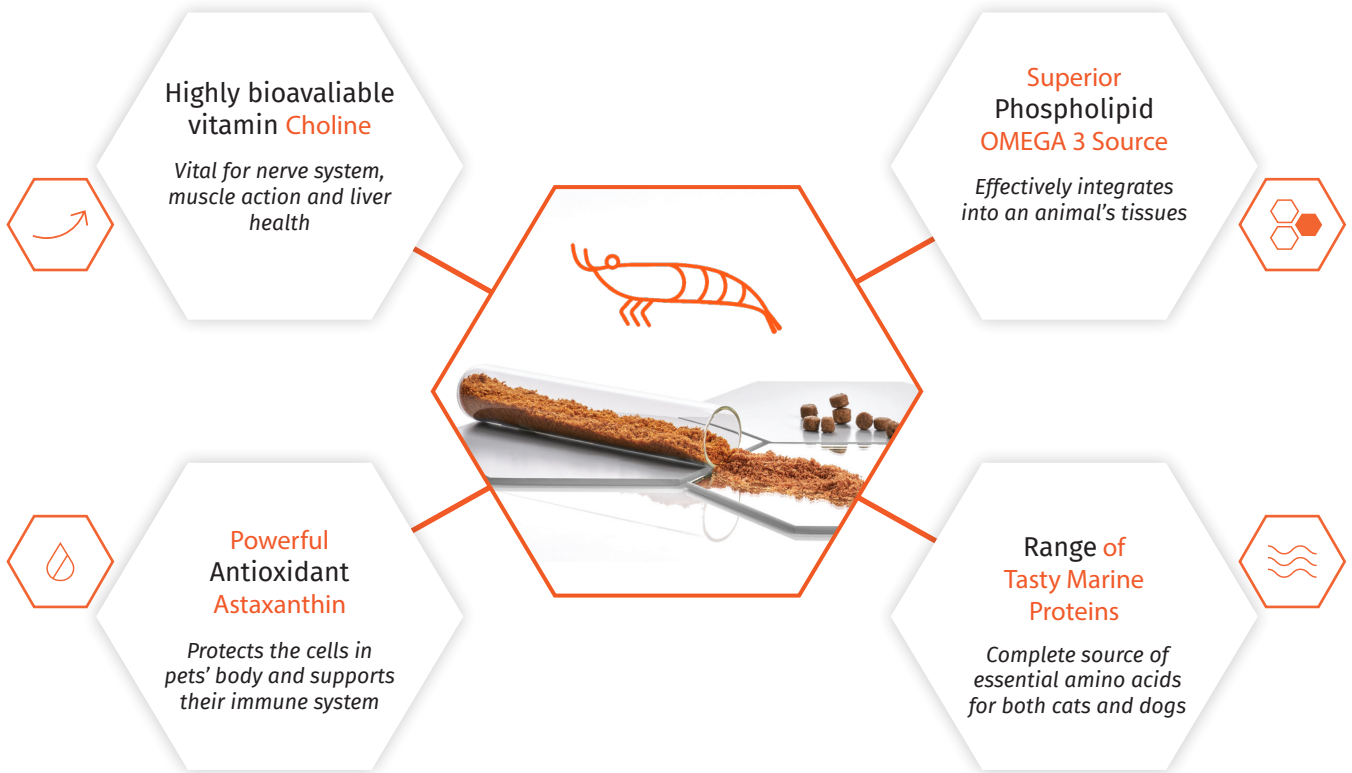

**Sustainable**  
and Traceable

**Backed by**  
**Science**

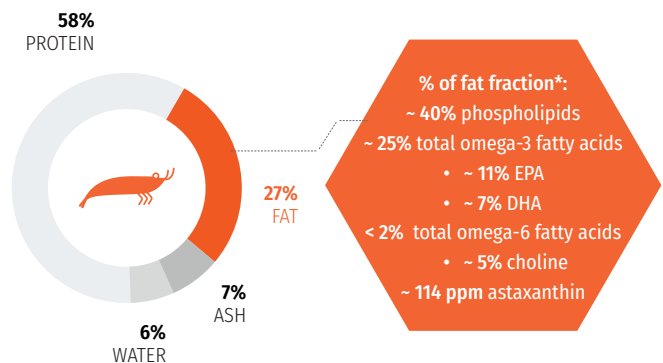

## “One ingredient - many benefits”

- Outstanding health benefits for heart, kidney, liver, joints, brain, eyes and skin
- Positive impact on pets cognition, longevity and muscle action
- Protects body cells, supports the immune system and helps to fight inflammation
- Can be successfully used in both dry and wet pet food, as well as supplement and treats

**QRILL Pet PL NUTRI Plus** is a functional ingredient for pet food made from all-natural whole Antarctic krill.

QRILL Pet PL NUTRI Plus is a natural source of **phospholipid omega-3, choline**, the **antioxidant astaxanthin** and **marine proteins**. The unique distinction of krill omega-3s is that they are mainly bound to phospholipids. Omega-3s in phospholipid form, due to their chemical composition, are less available as energy and more efficiently incorporated into cell membranes where they can positively influence health.

\*The numbers are target/mean values only. Seasonal variations will occur. For guaranteed values, see product specification.

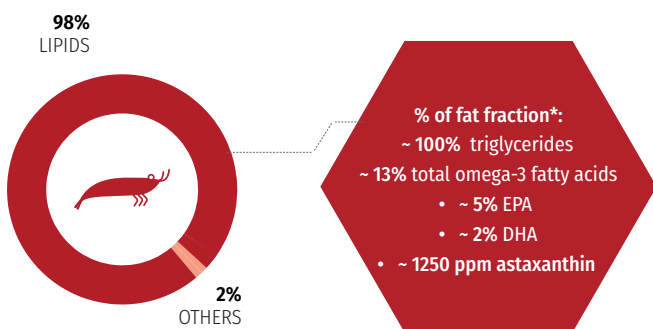

**QRILL Pet ASTA OMEGA Plus** is an all natural supplement sourced from Antarctic krill (*Euphasia superba*). A part from the fat fraction of krill provides this powerful dark red oil which offers pets a compelling combination of:

- **antioxidant astaxanthin**
- triglyceride **omega-3s**

A unique advantage of **ASTA OMEGA Plus** is that all its nutrients come from a single source, free from preservatives or additives.

**Target function:** general health, immune system, healthy skin and shiny coat.

### Application

**QRILL Pet ASTA OMEGA Plus** can be used as a standalone supplement for pets or implemented into functional chews and similar. Recommended for increasing antioxidant- and EPA/DHA levels in your formula.

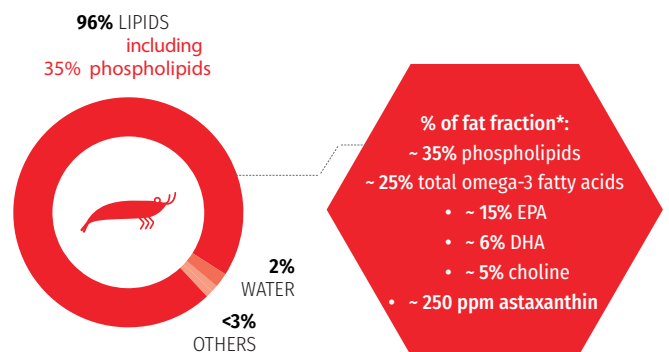

**QRILL Pet PL OMEGA Plus** is an all natural speciality performance supplement made from Antarctic krill meal. The oil contains:

- **phospholipid bound omega-3**
- **choline**
- **antioxidant astaxanthin**

Phospholipid-bound omega-3s are known to be more effective in increasing omega-3s in a pet's body compared to triglyceride-based omega-3s, such as found in fish oil.

**Target function:** joint health, cognition, skin health, brain function, heart health etc.

### Application

**QRILL Pet PL OMEGA Plus** can be used as a standalone supplement for pets or implemented into feed, functional chews and similar. Recommended for preventive or treatment formulations.

\*The numbers are target/mean values only. Seasonal variations will occur. For guaranteed values, see product specification.

QRILL Pet is a product of Aker BioMarine, a leading biotechnology company developing and supplying krill-derived products for consumer health and animal nutrition. The QRILL Pet product line consists of 3 products: PL NUTRI Plus (our flagship krill meal product) PL OMEGA Plus oil, and ASTA OMEGA Plus oil. When developing our functional marine ingredient for pets, we kept our focus on the needs of pets and pet food formulators. Aimed at keeping pets healthy, QRILL Pet is not only a superior omega-3 source but also contains a powerful antioxidant called astaxanthin, natural choline, and palatable marine proteins. The unique distinction of krill omega-3s is that they are mainly bound to phospholipids. This superior marine ingredient is beneficial for cats, dogs, and even horses at every life stage.

## AKER BIOMARINE

Aker BioMarine is a leading biotechnology company developing and supplying krill-derived products for consumer health and animal nutrition. Dedicated to improving human and planetary health, the company has a strong position in the industry. Our krill-based ingredients come from a 100% traceable and sustainable supply chain.

### QRILL Pet products come from one of the most sustainable fisheries in the world.
