

Seaweed for pet food

Seaweeds are macroalgae which can contain polysaccharides, specific proteins, antioxidants, omega-3s, and are also rich in important minerals. Those bioactive components contribute to improved digestive function and better nutrient use in pets. Our seaweed blends contain a mixture of red, brown and green seaweed species. With a seaweed blend we can fulfil the requirements of each animal species regarding polysaccharides and minerals, and gain broad efficacy, as each seaweed within the blend brings its own distinct performance.

Benefits of seaweed blends

- ♥ **100% NATURAL AND SUSTAINABLE PRODUCT**
- ♥ **RICH IN MINERALS**
- ♥ **PREBIOTIC EFFECT**
- ♥ **SUPPORTS ENHANCED DIGESTIVE BALANCE**
- ♥ **SHINY AND SOFTER COAT**
- ♥ **BETTER AND FIRMER STOOLS**
- ♥ **GOOD TASTE AND PALATABILITY**
- ♥ **SUPPORTS INCREASED STAMINA, MORE ENERGY**

Mode of action

Polysaccharides like alginates, fucoidan, laminarin and ulvan have a prebiotic effect. This means that the seaweed stimulates the growth of good bacteria in the gut. Some other bioactives present in seaweed have been shown to have a natural antibacterial effect and, by increasing the population of beneficial bacteria with prebiotics, there can be a competitive inhibition effect on the pathogenic bacteria. Besides those effects some seaweeds have been shown to support stimulation of the immune system and to support a positive effect on intestinal epithelium.

CLEAN LABEL - ORGANIC - HYPOALLERGENIC - VEGETARIAN

Natural clean label

Seaweed blends are produced and harvested sustainably. Seaweed blends for pets with an organic certificate can also be supplied. Therefore it fits fantastically in clean label, natural and sustainable pet food diets.
